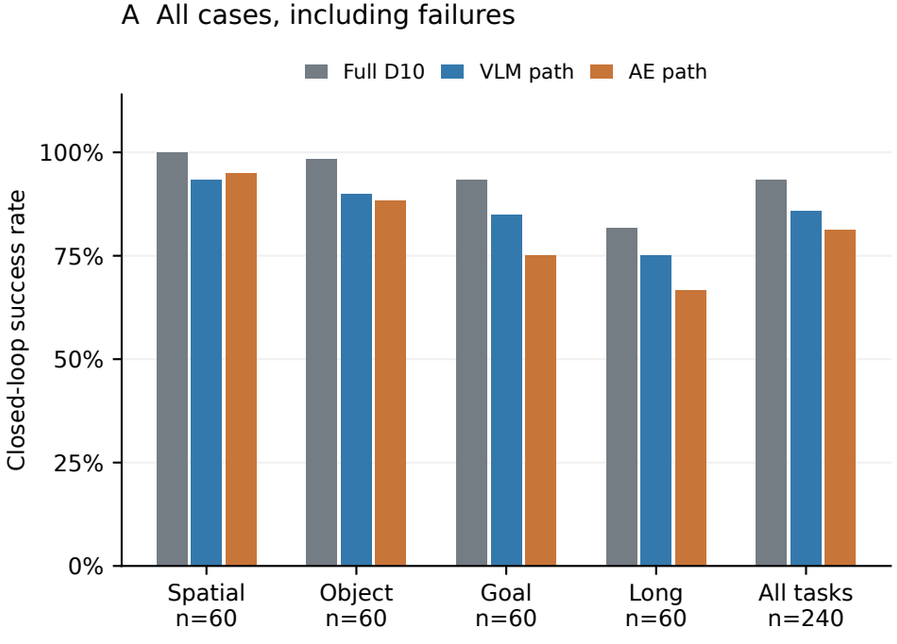
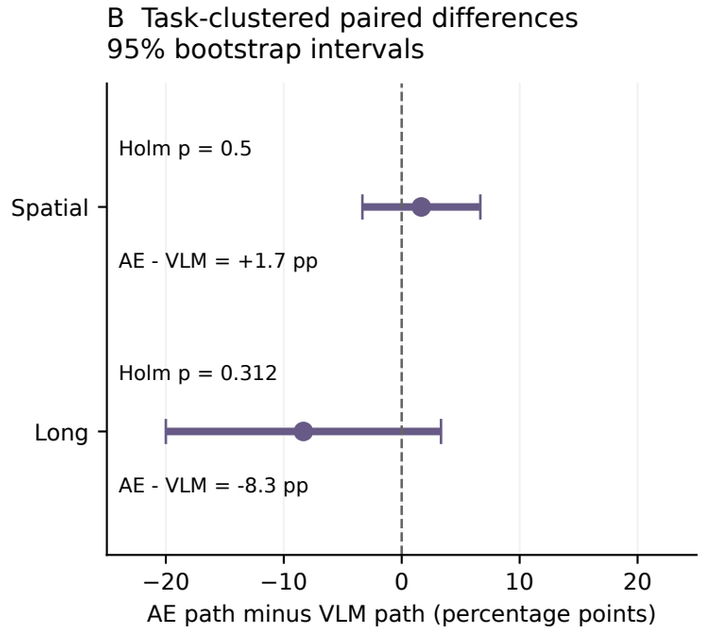
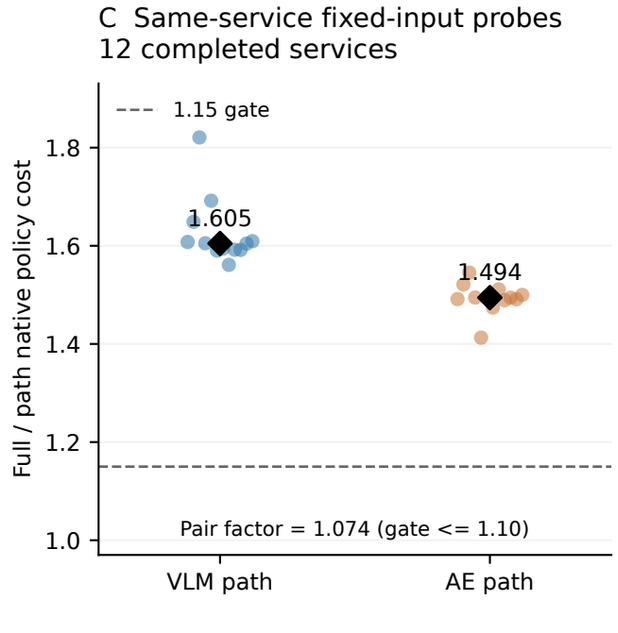
Prespecified R5 fast-path replication: not reproduced

VLM path = VLM12 / AE18, Fast D2 | AE path = VLM18 / AE14, Fast D3 | H50 / R5, Full + two Fast







720 rollouts: 3 conditions x 40 tasks x 3 official initial states x 2 fixed policy-noise streams; 120 physical cases and 240 rollouts per condition.

B: ten whole-task clusters per suite, six paired observations per task; one-sided exact task signflip with Holm2. C: native policy cost, not closed-loop speed.

Initials 47-49 are held out relative to R5 discovery 45-46; the same official initial states were used in historical R12 experiments.
