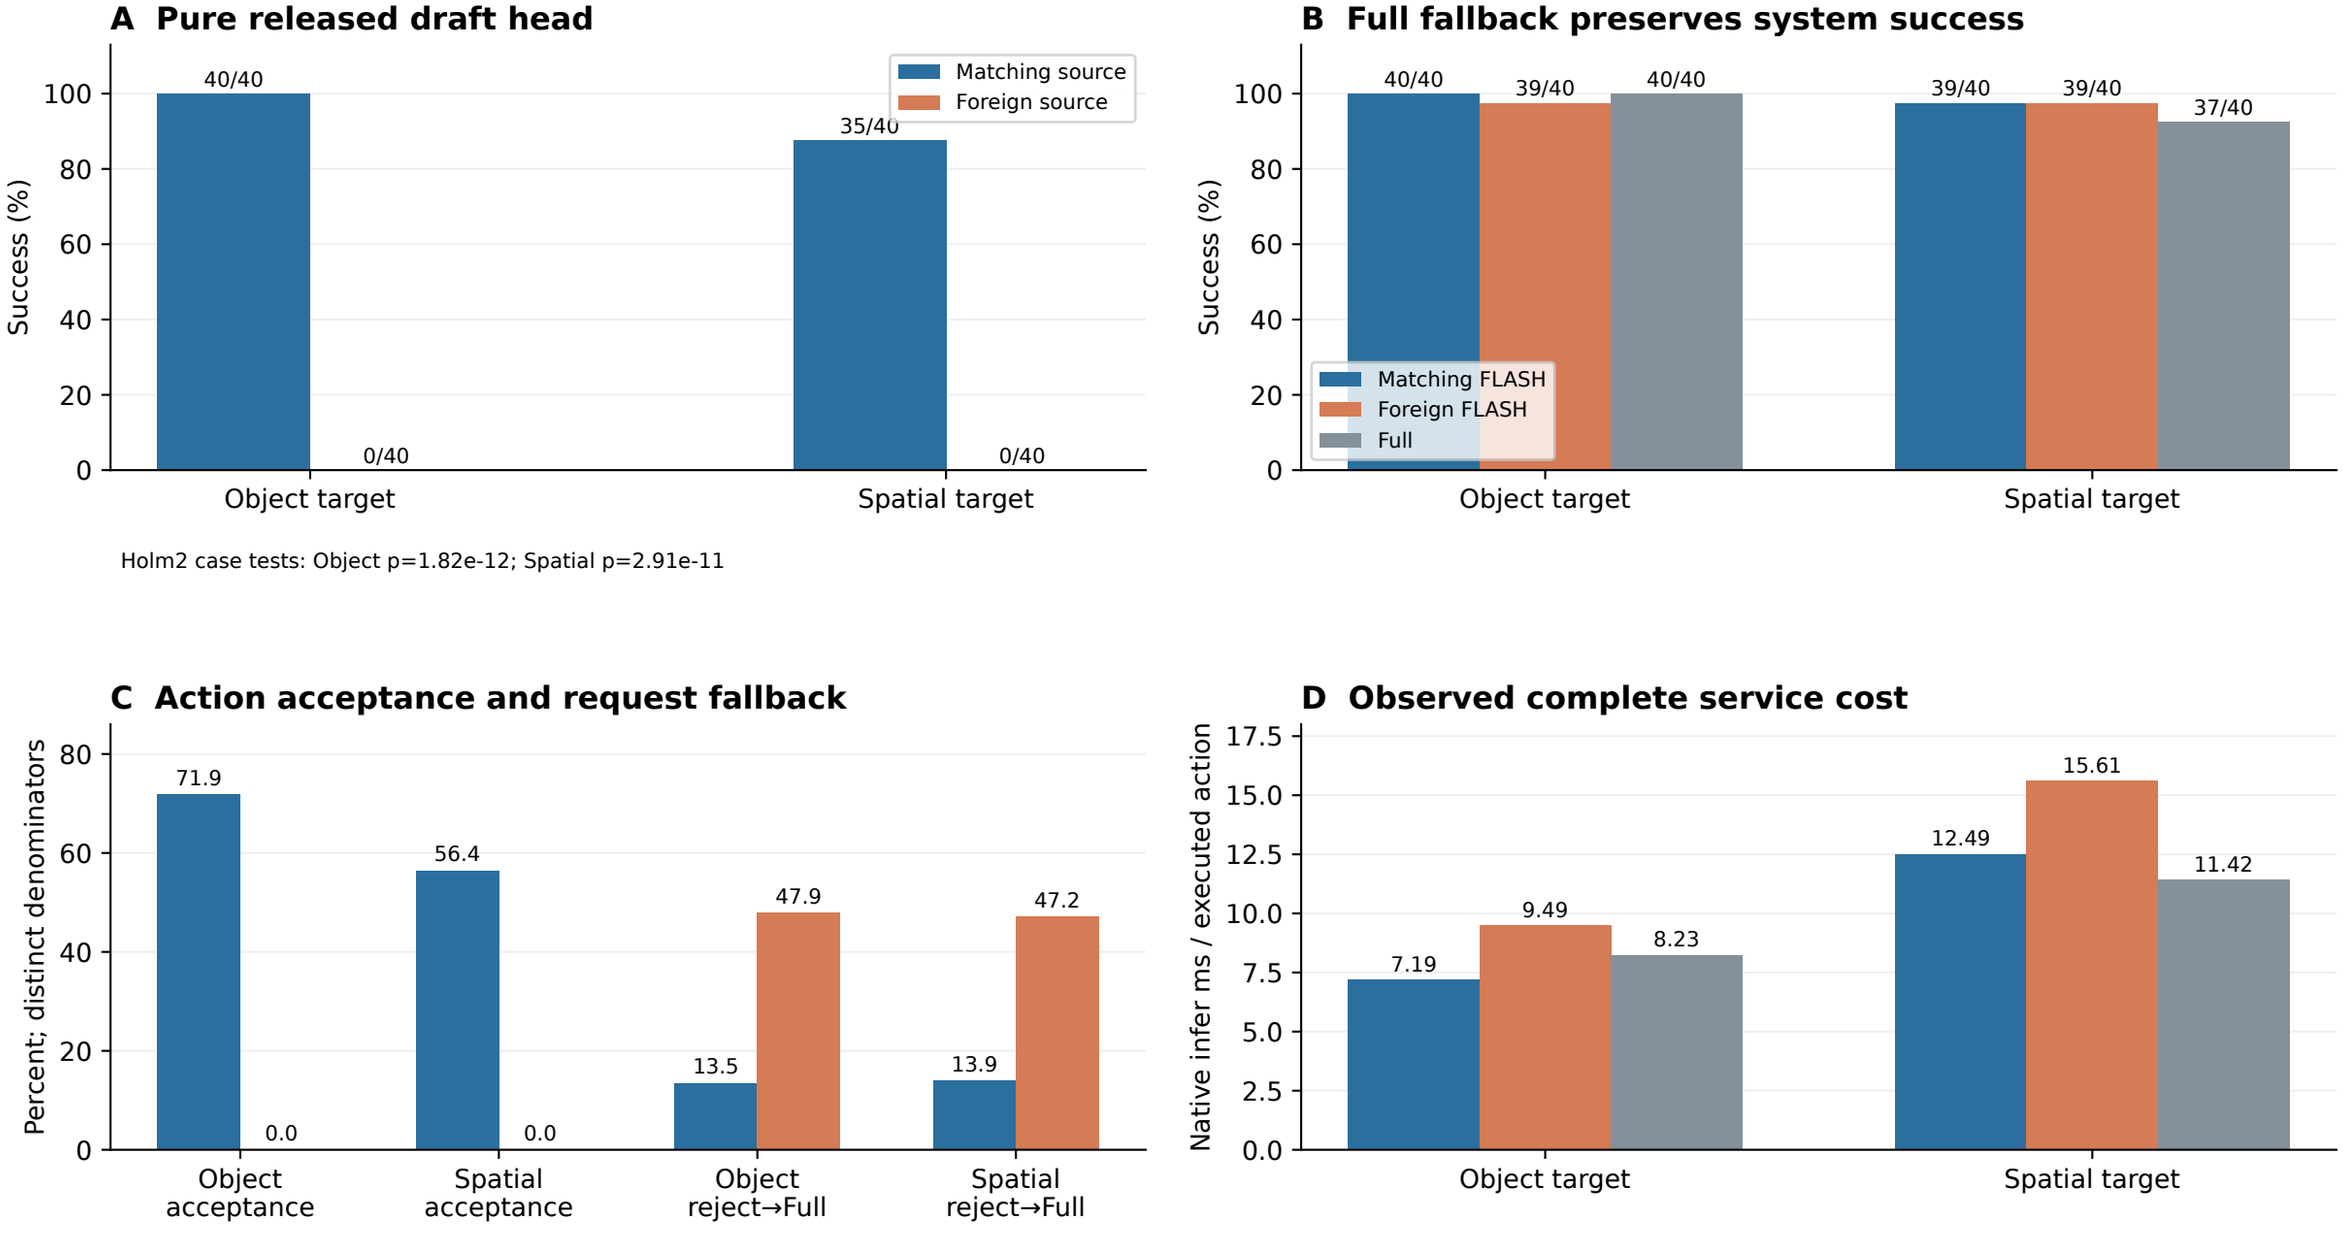
Released FLASH head transfer on fixed target suites



Confirmation: ten fixed tasks per target, init21–24, n=40 per condition; 400 episodes. Common Pi0 inference contract.
Acceptance is action-budget weighted; reject→Full is a request fraction. Timing includes zero-action rejection requests, cold compilation and shared load.
Operational released-head portability evidence; training/preprocessing provenance remains incomplete. No unseen-task, all-draft or controlled deployment-speed claim.
