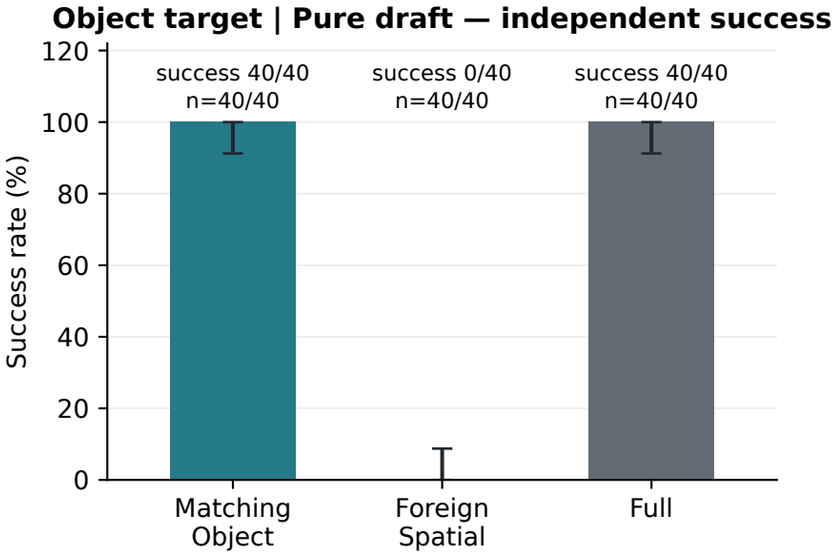
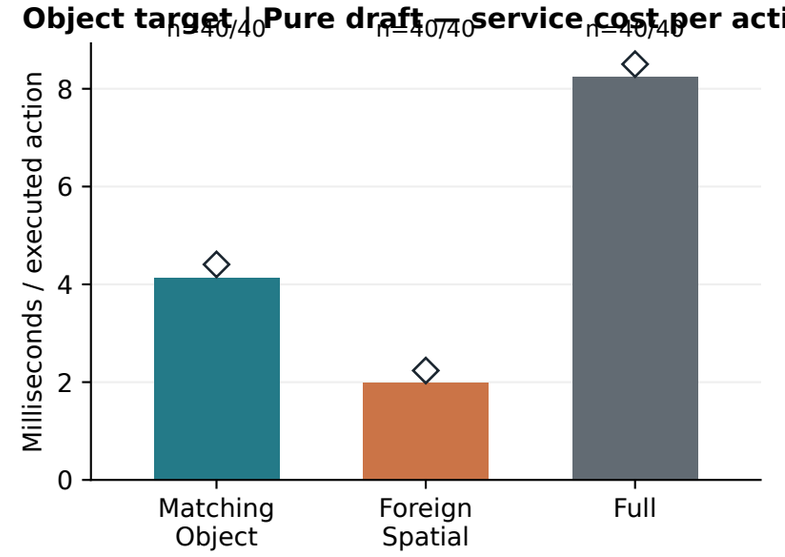
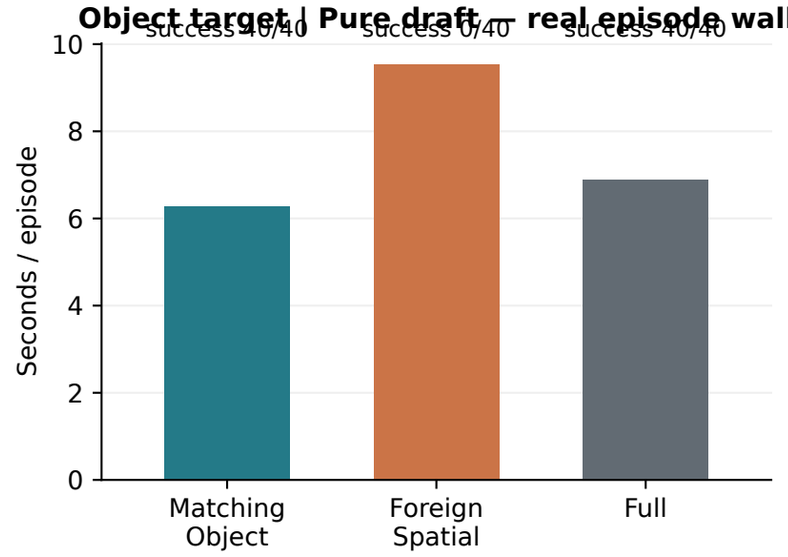
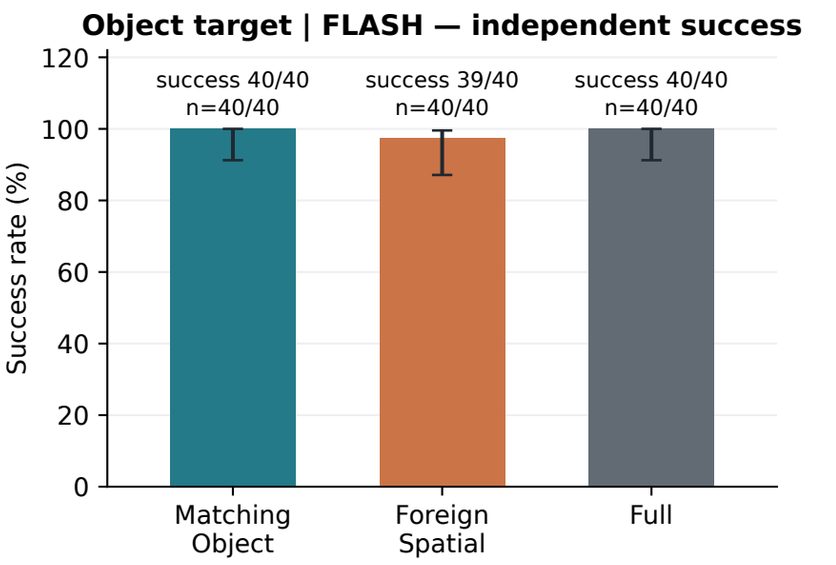
INDEPENDENT REPLICATION — COMPLETE

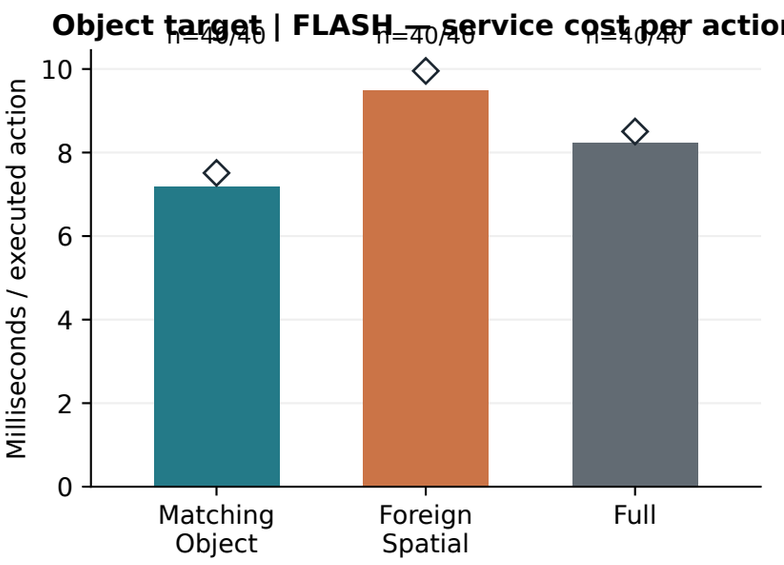
Held-out init21–24 only; same-target matching/foreign comparisons. Full baseline repeated for context.

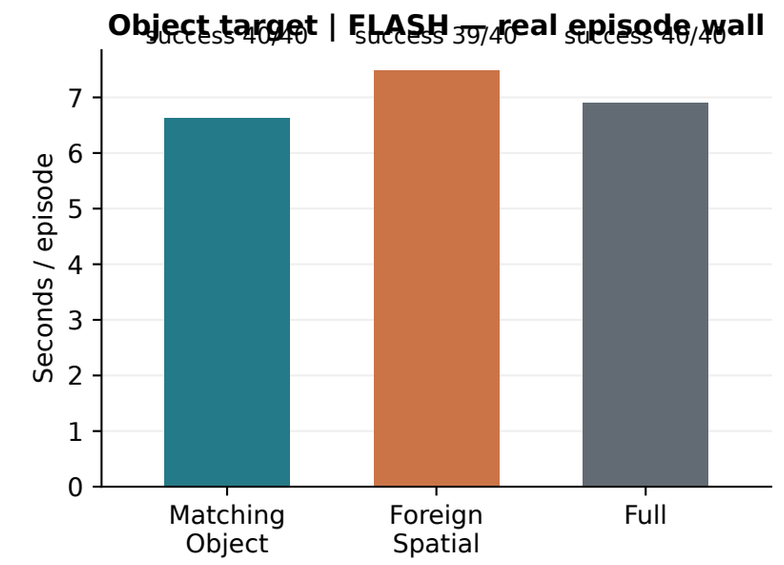


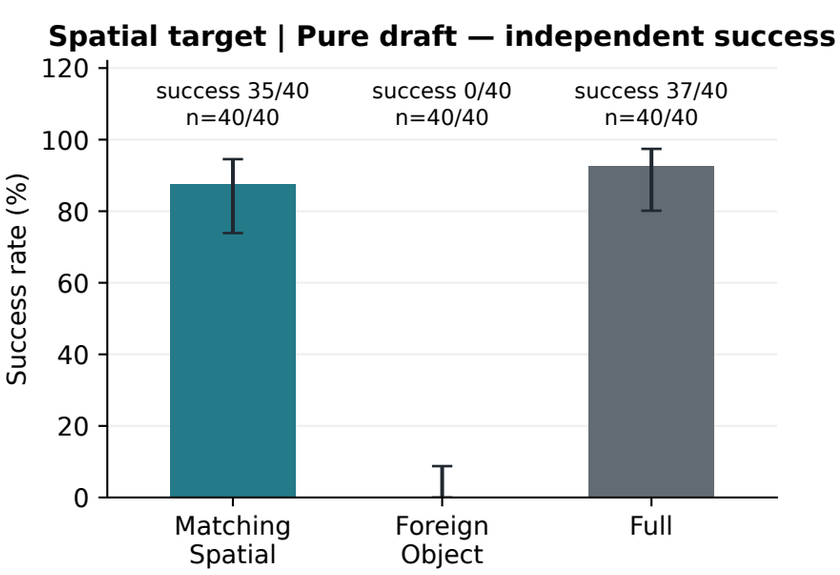


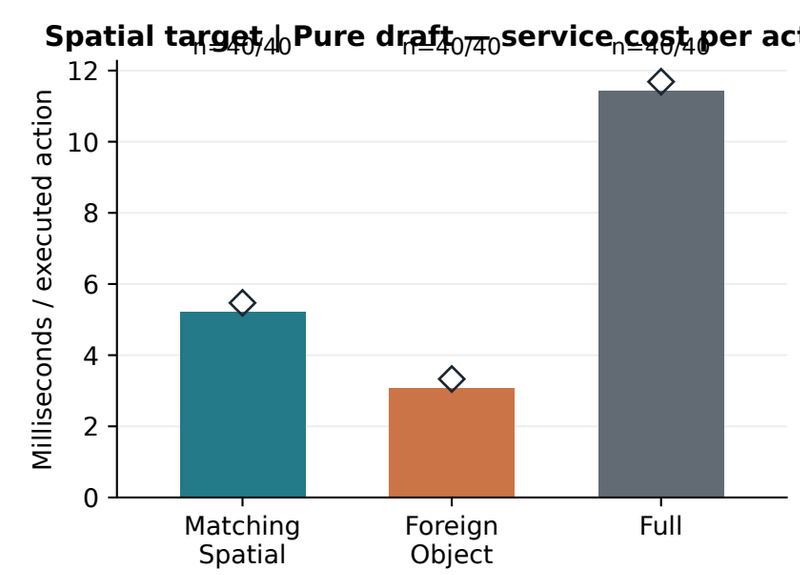


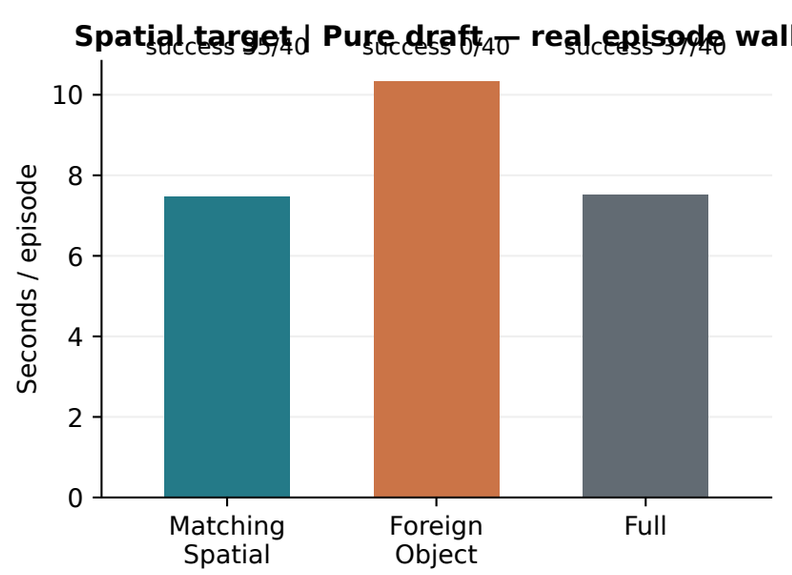


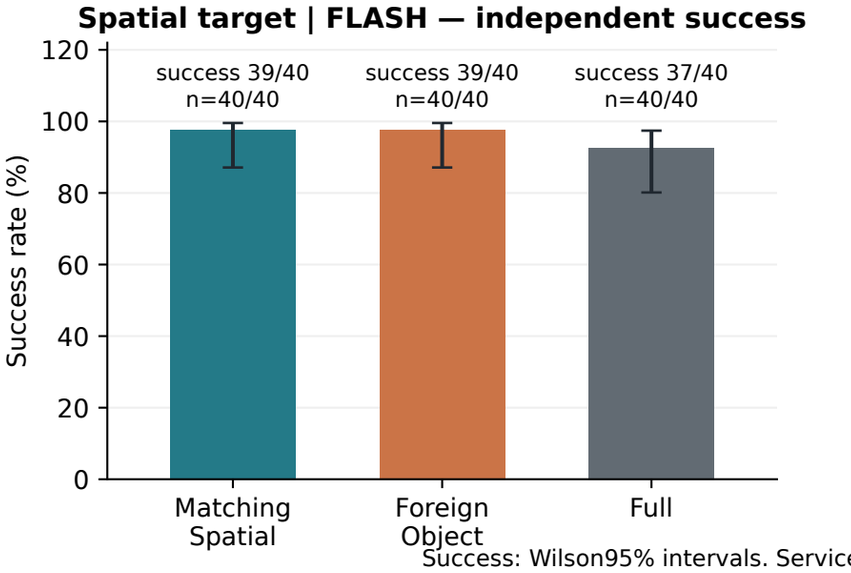


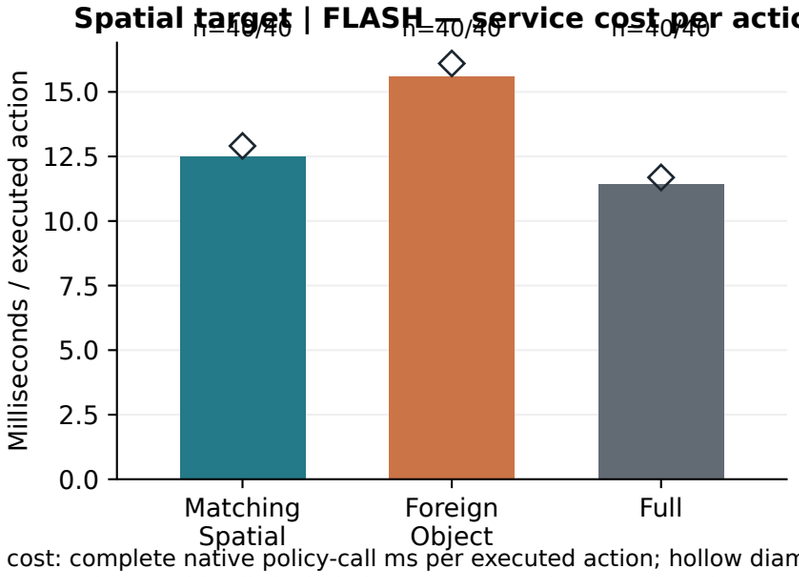


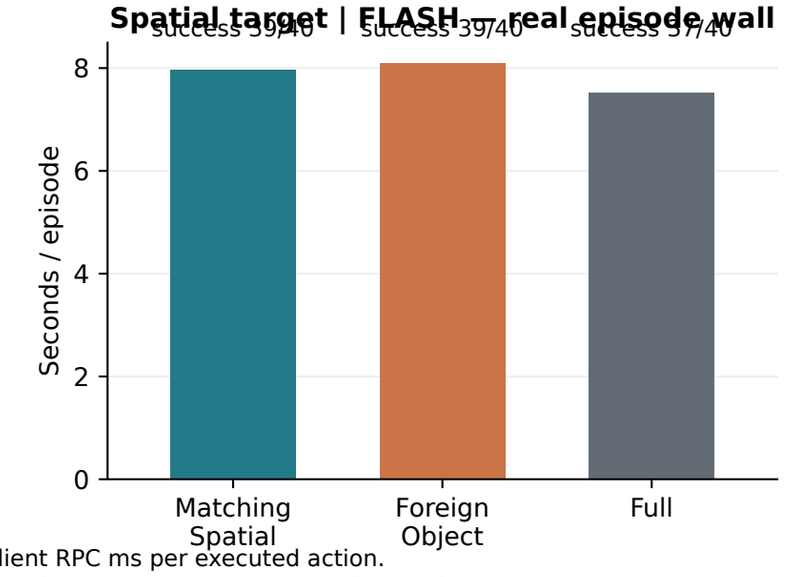












Success: Wilson95% intervals. Service cost: complete native policy-call ms per executed action; hollow diamond: client RPC ms per executed action.
All requests count, including rejections with zero actions. Cold calls included. Mean request latency alone is not actual speedup; GPU stages are not end-to-end.
Discovery data are excluded. Full input SHA256 values are recorded in figure_provenance.json.
